MATABLA state-of-the-art, ecological tables **On sale at www.matabla.com**

The tables of tomorrow...

From the conception of the system to the stringent tests, guaranteeing their high quality, MATABLA tables are produced with the utmost respect for the environment:

- Use of products with a limited impact on the environment
- Efficient use of raw materials
- Use of non-polluting production techniques
- Use of recyclable materials

Practical information

The furniture is produced according to the principles of sustainable development: "double life" reversible table top, recyclable steel frame, epoxy paint finish (powder fixed through an electrostatic process, the surplus being recovered and re-used), table top made in MDF to PEFC (Programme for the Endorsement of Forest Certification schemes) standards, use of formalin-free glues, and solvent-free paint, ink and varnish, dried through UV rays, screw- and bolt-free assembly.

All materials used come from Europe, limiting CO2 emissions due to transport. The flat-pack is ultra-compact, further reducing the polluting effect of transportation, and only recyclable card and paper packaging are used.

State-of-the-art and multifunctional tables

For working, meeting, playing or dining, MATABLA tables have been designed for professional or private use, or both! Completely modular, these state-of-the-art, multi-functional tables offer an innovative concept: the choice of several printed finishes for the tabletop and four different colours for the frame. This system allows you to customise the tables to your own requirements. A horizontal or vertical electrification system is also available. Competitively priced: Table One 50x132cm, from just 450€.
